

## **Features**

The project will include three major features which will include responding to a series of questions. The user will be able to review the list of questions that can be asked. There will also be a prompt to collect suggestions for new questions by new users.

## **Technology**

This project will require knowledge of HTML, CSS, and Javascript. The assets will be designed with pencil, paper, and the Adobe Cloud. Kim and I have access to a MacBook and a desktop computer. Jennifer has access to a desktop computer and a Microsoft Surface tablet.

## **Assessment of skills Required**

Kim and Jennifer will be learning how to utilize the GSAP library to create the animations. The SVGs for our assets will be created in Adobe Illustrator.

## **Responsibilities**

Kim will be in charge of the backend, JSON, and Javascript. Jennifer will be charge of the UI design and the creating the artwork and animations. Both designers will be working together to provide aid in all aspects of the project's concept and creation.
